Tesla Escort Redline 360c Mount Instructions

Thank you for purchasing the Bartallama3D Tesla Escort Redline 360c Mount.

This mount allows you to mount a Escort Redline 360c Radar Detector to the center display screen of your Tesla. The mount is designed to hold the radar detector and prevent it from shifting while driving while also keeping it at eye level for easy visibility.

Key Features of the Apple Vision Battery Holder with Arm Band

- Mounts your radar detector on the center screen
- Securely holds the radar detector
- Mounts to your screen securely to prevent shifting while driving
- Integrated cable clips for clean cable management down the back of your screen
- Simple and quick assembly

Full product details, specifications, additional links, revision history, product photos, and demo video can be found on our website at <https://www.bartallama3d.design/products/8-tesla-escort-redline-360c>

Assembly Instructions

Step 1: Assemble the Base Plate to the screen backer using the 2 button head screws and 2 washers. Make sure you are using the button head screws, they are rounded on top to complete this part of assembly.

Step 2: Install the Radar holder bottom to the Base Plate. For this step we will be using the 2 flat head screws found in the package. It is important that you use the flat screws, their head is shaped like a V. These screws are used to create clearance for the radar to fit inside the holder without snagging on a button head screw.

Step 3: Install the radar holder top but we will only be lightly threading in the screws so that we can install the radar unit in the next step.

Step 4: Install the radar unit into the holder. Insert the unit from the back into the holder. Once the unit is in place and you have aligned the top protrusion with your unit's matching hole, tighten down the two black top screws we installed previously.
